

Assembly is a breeze...

Instructions & Tips

1. For Garden Mounts-Drive the silver ground stake (5/16 dia x 30 long) halfway into the ground approx 16". Place the 60 garden mount over the top of the silver stake. (If you have a 2 pc rod, screw it together 1st).

2. If you purchased either a Rain gauge or a Welcome or Go Away sign, go to step #3. If not then jump to step #4.

3. Lightly lubricate the small rubber grommet with either a cooking spray or light vegetable oil and slide it over the top of the pole and position it approx. 9 -12" from the tip of the pole.

4. Loosen the screw on the EWNS directional that is located between the N and E and slide it down onto the pole approx 6" from the tip. Point the N to the North and then tighten the screw.

5. Slide the windcups onto the silver pin with the bearing side facing the ground.

6. Place the design top onto the pole.

- To insure that your top continues to spin freely-place a few drops of light oil into the tube of the design top periodically.

- If using a roof mount style mount it is recommended that you ground your weathervane in case of a lightning strike.

This product has been clear coated for added beauty and durability
